

**RTC 6i Air-to-water Heat Pump**

**Main Features**

<b>Application</b>	heating and cooling, DHW heating
<b>Description</b>	the heat pump gains energy from the ambient air (at outdoor temperatures as low as -25°C), the energy is then "pumped" to a higher temp. and transferred into heating water, the flow temperature can reach up to 55°C; in cooling mode, it absorbs heat from the cooling water (at ambient temperatures of up to 55 ° C), the water temperature can be as low as 5 ° C at the outlet from the heat pump; equipped with modulating compressor control
<b>Working fluid</b>	R410A (cooling circuit), water (heating circuit)
<b>Installation</b>	the heat pump must be installed together with a pump station and controller (for codes see the Catalogue)
<b>Code</b>	<b>17735</b>
